Perspectives on Self-Advocacy: Comparing Perceived Uses, Benefits, and Drawbacks Among Survivors and Providers

Teresa L. Hagan, PhD, RN, Margaret Q. Rosenzweig, PhD, CRNP-C, AOCN®, Kristin K. Zorn, MD, G. Josie van Londen, MD, MS, and Heidi S. Donovan, PhD, RN

Hagan is a postdoctoral research fellow at Massachusetts General Hospital and Harvard Medical School in Boston; Rosenzweig is an associate professor in the School of Nursing at the University of Pittsburgh in Pennsylvania; Zorn is an associate professor in the Winthrop P. Rockefeller Cancer Institute at the University of Arkansas for Medical Sciences in Little Rock; and van Londen is an assistant professor in the School of Medicine and Donovan is a professor and vice chair for research in the School of Nursing, both at the University of Pittsburgh.

This research was funded by a grant (F31NR014066) from the National Institute of Nursing Research/National Institutes of Health. Hagan was supported by a Doctoral Degree Scholarship in Cancer Nursing (DSCN-14-077-01-SCN) from the American Cancer Society.

All of the authors contributed to the conceptualization and design and provided the analysis. Hagan completed the data collection and provided statistical support. Hagan, Rosenzweig, van Londen, and Donovan contributed to the manuscript preparation.

Hagan can be reached at thagan@mgh.harvard.edu, with copy to editor at ONFEditor@ons.org.

Perspectives on Self-Advocacy: Comparing Perceived Uses, Benefits, and Drawbacks Among Survivors and Providers

Self-advocacy, defined as a cancer survivor’s ability to get his or her needs met in the face of a challenge, is a critical skill for those facing the overwhelming disease and psychological burdens of cancer (Hagan & Donovan, 2013a, 2013b). Self-advocacy consists of three main skills: (a) making informed decisions, (b) finding strength through connection with others, and (c) communicating effectively with the oncology care team. Survivors need to be equipped with these skills to ensure that they can engage in their care, make personally meaningful decisions, and voice their concerns, particularly when it is difficult or uncomfortable (Walsh-Burke & Marcusen, 1999). Survivors can use these skills throughout their cancer experience to face their ongoing symptom management and meet their health promotion needs.

Protecting survivors’ rights to self-determination is upheld as a professional duty by all healthcare providers. Provision 3 of the American Nurses Association’s...
