HIV Rapid Tests: Progress, Perspective, and Future Directions

Joe Burrage, Jr., PhD, RN

In November 2002, the U.S. Food and Drug Administration approved the OraQuick® Rapid HIV-1 Antibody Test (OraSure Technologies, Inc., Bethlehem, PA), a reliable, rapid test that detects HIV-1 antibodies. In contrast to other HIV-testing techniques, the OraQuick test uses blood obtained by finger stick instead of venipuncture and provides results in 20 minutes. Implications for practice, as well as future applications of this technology, are discussed in this article.

Key Words: HIV, HIV antibodies, anonymous testing

Test Administration

The OraQuick test is designated as “moderate complexity” under the Clinical Laboratory Improvements Amendments (CLIA) of 1988 (FDA, 2002). This designation indicates that this test can only be given in CLIA-approved laboratories by CLIA-certified laboratory technicians or medical staff. However, if the manufacturer applies for and receives a CLIA waiver, the test could be used in smaller healthcare settings (e.g., HIV-counseling centers) and potentially could be administered by other credentialed individuals, such as social workers practicing in counseling centers (see Figure 1). A CLIA waiver allows the test to be given where testing and counseling services are recommended or receive HIV CTR counseling and testing. The counseling, testing, and referral (CTR) guidelines, according to the CDC (2001), are as follows.

- Protect the confidentiality of clients who are recommended or receive HIV CTR services.
- Obtain informed consent before performing an HIV test.
- Provide clients with the option of anonymous HIV testing.
- Provide information regarding the HIV test to all who are recommended and to all whether prevention counseling is provided or not.
- Adhere to local, state, and federal regulations and policies that govern the provision of HIV services.
- Provide services that are responsive to client and community needs and priorities.
- Provide services that are appropriate to the client’s culture, language, sex, sexual orientation, etc.
- Ensure high-quality services.
